Hasan Nasir

365-228-6646 | hasan.nasir100@gmail.com | LinkedIn | Portfolio | GitHub

Education

University of Toronto *Graduated June 2026*

Honours Bachelor of Science in Computer Science, Statistics, and Geospatial Data Science

Relevant Coursework: Data Structures and Algorithms, Software Design Patterns, Relational Databases, Software Tools and Systems Programming, Spatial Data Science, Cloud-based Image Analysis

Experience

Interac Corporation | Cloud Engineer Co-op **Jan 2025 - Aug 2025**

- Engineered Terraform-based AWS environments for **3** multi-account cloud migrations, automating provisioning of **VPC, ELB, and RDS** infrastructure across development and staging environments.
- Architected centralized AWS ELB access logging to Amazon S3 across **4** projects, providing SRE teams with centralized traffic visibility for monitoring and incident investigation.
- Developed reusable Terraform modules for AWS CloudHSM and SES, standardizing provisioning for **3+** teams.
- Established secure AWS Site-to-Site VPN connectivity between on-premises Oracle and Amazon RDS PostgreSQL, enabling continuous database replication via AWS DMS.

Royal Bank of Canada | Technical Systems Analyst Co-op **Sep 2024 - Dec 2024**

- Engineered reverse-proxy configurations for a hybrid Apigee migration, routing internal REST API traffic between legacy and migrated backend services.
- Automated lifecycle management for **5** internal microservices through service offboarding and configuration changes, reducing manually managed services by **30%**.
- Automated Apigee migration configuration testing through CI/CD-integrated Python scripts, detecting non-compliant changes before deployment.

Interac Corporation | Cloud Engineer Co-op **May 2024 - Aug 2024**

- Assessed **3** legacy platforms for cloud migration, identifying application dependencies and migration prerequisites.
- Migrated Kubernetes telemetry to Splunk OpenTelemetry, standardizing logs through Helm deployments.
- Upgraded Ambassador API Gateway filters across Kubernetes clusters, strengthening incoming request filtering.

Projects

Comic Catalog | *Java, Spring Boot, PostgreSQL, OpenAI Codex*

- Engineered a **3-service** Spring Boot architecture integrating catalog, ratings, and comic services through REST APIs.
- Integrated Netflix Eureka for dynamic service discovery and PostgreSQL with JPA/Hibernate for persistent storage.
- Built a React/Vite frontend connected to Spring Boot REST APIs, enabling end-to-end CRUD workflows.

Brother Eye | *Python, AWS (Lambda, S3, DynamoDB, Rekognition), React*

- Built a **serverless authentication system** using AWS Rekognition and Lambda for facial user registration and image-based identity verification.
- Orchestrated an **event-driven pipeline** across S3, Lambda, Rekognition, and DynamoDB for facial image ingestion, comparison, and user lookup.

Skills

Languages: Python, Java, SQL, Bash
Development Tools: Spring Boot, FastAPI, PostgreSQL, Git, GitHub Actions/Copilot, Docker, Postman, OpenAI Codex
Cloud and Infrastructure: AWS (S3, EC2, RDS, ECS, Lambda, Bedrock), Terraform, Kubernetes, Infrastructure as Code
Development Practices: Object-Oriented Design, REST APIs, Microservices, CI/CD, Agile/Scrum, Software Development Lifecycle (SDLC)
