

Hasan Nasir

365-228-6646 | hasan.nasir100@gmail.com | [LinkedIn](#) | [Personal Website](#) | [GitHub](#)

Progress-oriented software engineer with 1.3 years of software development experience, committed to building scalable distributed systems. A natural collaborator who thrives in Agile teams and drives projects from design to deployment.

Education

University of Toronto

Graduation: June 2026

Honours Bachelor of Science in Computer Science, Statistics, and Geospatial Data Science

Relevant Coursework: Data Structures and Algorithms, Software Design Patterns, Relational Databases, Software Tools and Systems Programming, Spatial Data Science, Cloud-based Image Analysis

Experience

Interac Corporation

Jan 2025 - Aug 2025

Cloud Engineer Co-op

- Engineered **Terraform**-based **AWS** infrastructure-as-code (IaC) environments for **3** multi-account migrations, reducing deployment time by **50%** across enterprise workloads.
- Delivered bespoke reusable **Terraform** modules for AWS services, standardizing automated deployments for **5+** projects.
- Architected centralized AWS ELB access logging **system design** across **4** projects, achieving full observability for automated SRE monitoring and incident response.
- Deployed site-to-site VPN connectivity between on-prem **Oracle** databases and **PostgreSQL** on AWS RDS for secure bi-directional database optimization and replication.

Royal Bank of Canada

Sep 2024 - Dec 2024

Technical Systems Analyst Co-op

- Refactored reverse proxy configurations for hybrid Apigee migration serving **10+** internal **RESTful APIs**, improving **SRE** incident response and high availability for API traffic.
- Optimized lifecycle management of **5** internal microservices to streamline system efficiency, reducing overhead by **30%**.
- Developed validation scripts integrated with **CI/CD** pipelines for Apigee migration, enforcing **100%** standards compliance.

Interac Corporation

May 2024 - Aug 2024

Cloud Engineer Co-op

- Authored migration prerequisites for **3+** legacy platforms, aligning cloud adoption with GitOps and Agile-based SDLC practices to reduce planning time by **40%**.
- Migrated **Kubernetes** workloads to Splunk OpenTelemetry, standardizing logging automation across distributed systems.
- Implemented **Ambassador API Gateway** upgrades to enhance rate limiting and security across **Kubernetes** environments.

Projects

Comic Catalog *Java, Spring Boot, Maven, PostgreSQL, OpenAI Codex*

- Designed a scalable **microservices-based comic catalog** with **3 Spring Boot services**, exposing RESTful CRUD APIs and implementing inter-service communication.
- Configured **Netflix Eureka** for automated service discovery, eliminating hardcoded endpoints and improving fault tolerance through persistent PostgreSQL databases.
- Leveraged **OpenAI Codex** and **GitHub Copilot** to develop testing suites and a React-Vite frontend, consuming APIs for object CRUD and display.

Facial Rekognizer *Python, AWS (Rekognition, S3, Lambda, DynamoDB), React.js*

- Built a serverless facial recognition app using **AWS Rekognition ML models**, with an event-driven **Lambda** pipeline handling recognition workflows at scale.
- Architected automated **S3-triggered** event workflows to invoke **Lambda** on upload, enabling an automated end-to-end pipeline.

Skills

Languages: Python, Java, SQL, Bash

Development Tools: Spring Boot, PostgreSQL, Maven, Postman, Git, GitHub Actions/Copilot, OpenAI Codex, Claude Code

Cloud and Infrastructure: AWS (S3, EC2, RDS, ECS, Lambda), Terraform, Kubernetes, Docker, Infrastructure as Code (IaC)

Coding Practices: Object-Oriented Design, REST APIs, API Development, Microservices, Distributed Systems, System Design, CI/CD, Agile/Scrum, GitOps, Site Reliability Engineering (SRE), Software Development Lifecycle (SDLC)
